

MOTOCCLICK - NEW CLIENT ONBOARDING FLOW

Operational process for onboarding a new merchant from sales agreement to go-live

1. SALES PROCESS

- **Owner:** Sales Representative
- Close agreement with the client.
- Confirm delivery coverage, such as a 2-mile delivery radius.
- Confirm pricing: bike delivery rate, catering / car delivery rate, and any special conditions.
- Confirm which delivery channels the client currently uses, such as Uber Eats, DoorDash, Grubhub, Website, or other channels.
- Confirm whether the client is currently using another logistics company for deliveries.

2. INITIAL ONBOARDING CALL

- **Owner:** Onboarding Team
- Schedule the initial onboarding call with the client.
- Confirm the exact delivery channels that the client will give to Motoclick.
- Define if the merchant uses a POS system such as Toast, Square, Revel, or another POS.
- Confirm if the merchant uses software to centralize orders, such as Chowly, Stream, KitchenHub, or other middleware.

3. ECOSYSTEM REVIEW

- **Owner:** Onboarding Team + Technical Support
- Map the client's operational ecosystem before starting the technical setup.
- Identify the source of truth for orders: POS, middleware, delivery app dashboard, website, or email.
- Confirm if existing integrations could be affected by the Motoclick onboarding process.

4. INTEGRATION STRATEGY

- **Owner:** Onboarding Team + Jordan
- Define the best integration option based on the client's ecosystem.
- Available integration options may include KitchenHub, Email Protocol, Stream, Chowly, Direct API, or POS integration.
- Select the option that allows Motoclick to receive orders without interrupting the merchant's current kitchen flow.

5. IMPLEMENTATION REQUEST

- **Owner:** Onboarding Team
- Send the implementation request to Jordan through Notion, email, or WhatsApp.
- The request must include client name, channels, POS, middleware, delivery radius, rates, and selected integration method.
- Include all credentials, access details, or contact points needed for implementation.

6. TECHNICAL IMPLEMENTATION

- **Owner:** Jordan
- Create the Motoclick Merchant Panel.
- Configure the merchant account, delivery settings, and operational rules.
- Synchronize the Merchant Panel with the selected integration: Email Protocol, KitchenHub, Stream, Chowly, API, or POS option.

7. TESTING PHASE

- **Owner:** Jordan + Onboarding Team
- Run a test order for each channel connected to Motoclick.
- Verify that orders flow correctly into Motoclick.
- Verify POS printing, auto-acceptance, order data, pickup time, customer address, and dispatch synchronization.
- Document issues and resolve them before handoff.

8. OPERATIONS HANDOFF & GO-LIVE

- **Owner:** Operations Team
- Notify Operations once all channel tests are approved.
- Operations trains the client on how to use the Motoclick Merchant Panel.
- Explain the 'Order Ready' workflow and when orders are released to dispatch.
- Approve the merchant for go-live.

1

Sales closes deal

Confirm delivery radius, rates, channels, and current logistics provider.

2

Onboarding call

Confirm channels, POS, middleware, and merchant operating flow.

3

Map ecosystem

Identify POS, ordering channels, middleware, and order source of truth.

4

Choose integration

Select KitchenHub, Stream, Chowly, Email Protocol, or API/POS option.

5

Implementation request

Send request to Jordan via Notion, email, or WhatsApp.

6

Jordan setup

Create Motoclick Merchant Panel and sync selected integration.

7

Channel testing

Test each channel: order flow, POS printing, auto-acceptance, and dispatch sync.

8

Operations handoff

Notify Operations, train merchant, explain Order Ready workflow, and go live.
